this book provides a comprehensive foundation in probabilistic normed pn spaces for anyone conducting research in this field of mathematics and statistics it is the first to fully discuss the developments and the open problems of this highly relevant topic introduced by a n serstnev in the early 1960s as a response to problems of best approximations in statistics the theory was revived by claudi alsina bert schweizer and abe sklar in 1993 who provided a new wider definition of a pn space which quickly became the standard adopted by all researchers this book is the first wholly up to date and thorough investigation of the properties uses and applications of pn spaces based on the standard definition topics covered include the theory of pn spaces is relevant as a generalization of deterministic results of linear normed spaces and also in the study of random operator equations this introduction will therefore have broad relevance across mathematical and statistical research especially those working in probabilistic functional analysis and probabilistic geometry

the book collects the scientific contributions presented at the 10th workshop on self organizing maps wsom 2014 held at the university of applied sciences mittweida mittweida germany saxony on july 2 4 2014 starting with the first wsom workshop 1997 in helsinki this workshop focuses on newest results in the field of supervised and unsupervised vector quantization like self organizing maps for data mining and data classification this 10th wsom brought together more than 50 researchers experts and practitioners in the beautiful small town mittweida in saxony germany nearby the mountains erzgebirge to discuss new developments in the field of unsupervised self organizing vector quantization systems and learning vector quantization approaches for classification the book contains the accepted papers of the workshop after a careful review process as well as summaries of the invited talks among these book chapters there are excellent examples of the use of self organizing maps in agriculture computer science data visualization health systems economics engineering social sciences text and image

analysis and time series analysis other chapters present the latest theoretical work on self organizing maps as well as learning vector quantization methods such as relating those methods to classical statistical decision methods all the contribution demonstrate that vector quantization methods cover a large range of application areas including data visualization of high dimensional complex data advanced decision making and classification or data clustering and data compression

this distinctly nonclassical treatment focuses on developing aspects that differ from the theory of ordinary metric spaces working directly with probability distribution functions rather than random variables the two part treatment begins with an overview that discusses the theory s historical evolution followed by a development of related mathematical machinery the presentation defines all needed concepts states all necessary results and provides relevant proofs the second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known metric space results to a more general setting

this book is designed for the reader who wants to get a general view of the terminology of general topology with minimal time and effort the reader whom we assume to have only a rudimentary knowledge of set theory algebra and analysis will be able to find what they want if they will properly use the index however this book contains very few proofs and the reader who wants to study more systematically will find sufficiently many references in the book key features more terms from general topology than any other book ever published short and informative articles authors include the majority of top researchers in the field extensive indexing of terms
