i the overall value of payouts over the life of the enterprise ii the time profile of a firm's payouts across periods and iii the form of those payouts the authors conclude that today's theory does a good job of explaining the general features of corporate payout policies but some important gaps remain so while our emphasis is to clarify what we know about payout policy the authors also identify a number of interesting unresolved questions for future research corporate payout policy discusses potential influences on corporate payout policy including managerial use of payouts to signal future earnings to outside investors individuals behavioral biases that lead to sentiment based demands for distributions the desire of large block stockholders to maintain corporate control and personal tax incentives to defer payouts the authors highlight four important carry away points the literature's focus on whether repurchases will or should drive out dividends is misplaced because it implicitly assumes that a single payout vehicle is optimal extant empirical evidence is strongly incompatible with the notion that the primary purpose of dividends is to signal managers' views of future earnings to outside investors over confidence on the part of managers is potentially a first order determinant of payout policy because it induces them to over retain resources to invest in dubious projects and so behavioral biases may in fact turn out to be more important than agency costs in explaining why investors pressure firms to accelerate payouts the influence of controlling stockholders on payout policy particularly in non u s firms where controlling stockholders are common is a promising area for future research corporate payout policy is required reading for both researchers and practitioners interested in understanding this central topic in corporate finance and governance
