*investigates the connection between that ordinary notion of consequence and the formal analogues invented by logicians one claim of the book is that despite our apparent intuitive grasp of consequence we do not introspect rules by which we reason nor do we grasp the scope and range of the domain as it were of our reasoning this point is illustrated with a close analysis of a paradigmatic case of ordinary reasoning mathematical proof*

*the book offers a characterization of the meaning and role of the notion of truth in natural languages and an explanation of why in spite of the big amount of proposals about truth this task has proved to be resistant to the different analyses the general thesis of the book is that defining truth is perfectly possible and that the average educated philosopher of language has the tools to do it the book offers an updated treatment of the meaning of truth ascriptions from taking into account the latest views in philosophy of language and linguistics*

*a journey of words a battle of the mind how can we ever unravel the chaos in our world that we are living in i can no longer hold my silence i thought why have we not progressed in more meaningful ways without the specter of doom staring right back at us there are a myriad answers to be snatched at but to what avail the panic button is but an inch away but who will push it answers answers we all are crying out for but the bell still tolls and rings out its deep hollow empty reply are there answers to mankind's woes is there light at the end of our searching and will we ever be satisfied with the answers we obtain almost daily we are confronted as though looking over a precipice seeing no hope of ever crossing to the other side where the sun is rising where we get a glimpse of new hope and a fresh start blind truth will be confrontational it will challenge us it may stir the passions of right and wrong within us however there are things which will become undeniable to us no matter which side of the fence we choose to be on it is my greatest desire to attempt to bring together common but perhaps forgotten precepts that will help us forge ahead to a much brighter future*

*if we must take mathematical statements to be true must we also believe in the existence of abstracta eternal invisible mathematical objects accessible only by the power of pure thought jody azzouni says no and he claims that the way to escape such commitments is to accept as an essential part of scientific doctrine true statements which are about objects that don't exist in any sense at all azzouni illustrates what the metaphysical landscape looks like once we avoid a militant realism which forces our commitment to anything that our theories quantify escaping*

metaphysical straitjackets such as the correspondence theory of truth while retaining the insight that some truths are about objects that do exist azzouni says that we can sort scientifically given objects into two categories ones which exist and to which we forge instrumental access in order to learn their properties and ones which do not that is which are made up in exactly the same sense that fictional objects are he offers as a case study a small portion of newtonian physics and one result of his classification of its ontological commitments is that it does not commit us to absolute space and time
