this book discusses group theory investigations of zincblende and wurtzite semiconductors
 under symmetry breaking conditions the text presents the group theory elements required to
 develop a multitude of symmetry breaking problems giving scientists a fast track to bypass
 the need for recalculating electronic states the text is not only a valuable resource for
 speeding up calculations but also illustrates the construction of effective hamiltonians for a
 chosen set of electronic states in crystalline semiconductors since hamiltonians have to be
 invariant under the transformations of the point group the crystal symmetry determines the
 multiplet structure of these states in the presence of spin orbit crystal field or exchange
 interactions symmetry breaking leads to additional coupling of the states resulting in shifts
 and or splittings of the multiplets such interactions may be intrinsic as in the case of the quasi
 particle dispersion or extrinsic induced by magnetic electric or strain fields using a power
 expansion of the perturbations these interaction terms can be determined in their
 parameterized form in a unique way the hierarchic structure of this invariant development
 allows to estimate the importance of particular symmetry breaking effects in the hamiltonian
 a number of selected experimental curves are included to illustrate the symmetry based
 discussions which are especially important in optical spectroscopy this text is written for
 graduate students and researchers who want to understand and simulate experimental
 findings reflecting the fine structure of electronic or excitonic states in crystalline
 semiconductors

this book constitutes the refereed proceedings of the 5th recomb comparative genomics
 satellite workshop recomb cg 2007 held in san diego ca usa in september 2007 the 14 revised
 full papers presented address a broad variety of aspects and components of the field of

comparative genomics ranging from quantitative discoveries about genome structure to algorithms for comparative inference to theorems on the complexity of computational problems required for genome comparison
