nelson's study is based on over thirty interviews with lesbian mothers in Alberta. The women fall into two groups: those raising children who had been conceived in prior heterosexual relationships and those raising children who had been conceived within lesbian relationships. The two groups provide a valuable comparison because although the effects of the social context can be quite similar for each, their experiences of mothering are often strikingly different. Nelson explores such topics as reproductive decision making, interacting with other mothers, the effects of the social context in which lesbian mothering is occurring, step parenting, domestic and parenting roles, and raising boys. The non-supportive social milieu in which they exist is one of the major factors distinguishing lesbian families from many other families.
