the purpose of this book is three fold the first purpose is to posit that the fundamental substance of the universe is energy and that energy is required consumed for any material transformation or information transmission the labor theory of value articulated by the physiocrats and elaborated by adam smith david ricardo j b say and karl marx was a rough first approximation of the value creation process in the 17th and 18th centuries but is now obsolete labor is now mostly performed by machines not by humans or animals the second aim of the book is to argue that the economy is a living open system an island of order that exists far from both thermodynamic and economic equilibrium order is achieved by dissipating a flux of exergy economists frequently emphasize the equilibrium assumption introduced originally by leon walras in 1854 but in reality biological systems and human social systems are dissipative cycles far from both thermodynamic equilibrium and economic equilibrium yet stable and capable of evolution driven by the solar exergy flux the third aim of the book is to re emphasize that being open the economic system cannot be regarded as a collection of individual competitive utility maximizing transactions there are increasingly important possibilities for cooperation instead of competition moreover third party effects both bads externalities and the public good happiness need to be incorporated into the socio economic decision
