a former model agent casting director and producer of fashion shoots worldwide now a magazine editor offers inside tips on breaking into the modeling industry and finding representation on a budget

macroeconomic modelling has undergone radical changes in the last few years there has been considerable innovation in developing robust solution techniques for the new breed of increasingly complex models similarly there has been a growing consensus on their long run and dynamic properties as well as much development on existing themes such as modelling expectations and policy rules this edited volume focuses on those areas which have undergone the most significant and imaginative developments and brings together the very best of modelling practice we include specific sections on i solving large macroeconomic models ii rational expectations and learning approaches iii macro dynamics and iv long run and closures all of the contributions offer new research whilst putting their developments firmly in context and as such will influence much future research in the area it will be an invaluable text for those in policy institutions as well as academics and advanced students in the fields of economics mathematics business and government our contributors include those working in central banks the imf european commission and established academics

this volume examines all aspects of using agent or individual based simulation this approach represents systems as individual elements having their own set of differing states and internal processes the interactions between elements in the simulation represent interactions in the target

systems what makes this social is that it can represent an observed society social systems include all those systems where the components have individual agency but also interact with each other this includes human societies and groups but also increasingly socio technical systems where the internet based devices form the substrate for interaction these systems are central to our lives but are among the most complex known this poses particular problems for those who wish to understand them the complexity often makes analytic approaches infeasible but on the other hand natural language approaches are also inadequate for relating intricate cause and effect this is why individual and agent based computational approaches hold out the possibility of new and deeper understanding of such systems this handbook marks the maturation of this new field it brings together summaries of the best thinking and practices in this area from leading researchers in the field and constitutes a reference point for standards against which future methodological advances can be judged this second edition adds new chapters on different modelling purposes and applying software engineering methods to simulation development revised existing content will keep the book up to date with recent developments this volume will help those new to the field avoid reinventing the wheel each time and give them a solid and wide grounding in the essential issues it will also help those already in the field by providing accessible overviews of current thought the material is divided into four sections introduction methodology mechanisms and applications each chapter starts with a very brief section called why read this chapter followed by an abstract which summarizes the content of the chapter each chapter also ends with a section on further reading whilst sometimes covering technical aspects this second edition of simulating social complexity is designed to be accessible to a wide range of researchers including both those from the social sciences as well as those with a more formal background it will be of use as a standard reference text in the field and also be suitable for graduate level courses
