causal uncertainty is a wide spread phenomenon courts are often unable to determine whether a defendant s tortious conduct was a factual cause of a plaintiff s harm yet sometimes courts can determine the probability that the defendant caused the plaintiff s harm although often there is considerable variance in the probability estimate based on the available evidence the conventional way to cope with this uncertainty has been to apply the evidentiary rule of standard of proof the application of this all or nothing rule can lead to unfairness by absolving defendants who acted tortiously and may also create undesirable incentives that result in greater wrongful conduct and injustice to victims some courts have decided that this no liability outcome is undesirable they have adopted rules of proportional liability that compensate plaintiffs according to the probability that their harm was caused by the defendant s tortious conduct in 2005 the principles of european tort law petl made a breakthrough in this regard by embracing rules of proportional liability this project building on petl endeavours to make further inquiries into the desirable scope of proportional liability and to offer a more detailed view of its meaning implications and ramifications
