excerpt from the enrichment of ore deposits the problems of superficial alteration and enrichment are not simple not only do the several metals segregate in different ways but each metal may behave differently in different mineral associations every district and every deposit should be studied separately in the light of all available chemical and

geologic data there are however certain laws of segregation that almost invariably are clearly indicated and as data have accumulated many puzzling apparent exceptions to these laws have disappeared this paper is an amplification of an earlier survey bulletin on the enrichment of sulphide ores bulletin it is a discussion of representative deposits especially of the paragenesis of their ores and of the principles that underlie the processes of enrichment i hope it may suggest to those engaged in geologic work and in mining some lines of approach to the solution of the complex problems that are encountered in the field i realize fully that there may be serious omissions and possibly errors in the discussion of the complex problems here presented i shall esteem it a favor if anyone whose statements i may have misquoted or misinterpreted will set me right and if those who have had superior opportunities for study of certain districts will correct any wrong impressions that i may have given about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

excerpt from geology of colorado ore deposits this treatise contains the substance of a series of elementary lectures delivered by the author to the students of the colorado state school of mines it is published with a view of meeting some of the needs of the general public of the ordinary miner and of the unscientific many rather than with any idea of offering original matter for the discussion of the scientific few the materials are derived partly from the writer's own researches and largely from the most reliable resources available to him such as the standard text books and the valuable published reports of the united states geological survey the writer having for a time been connected with that survey knows full well how high a value is to be attached to those reports which must remain for all time as a standard of reference for those interested in the geological relations of the mines of colorado the first part of the work contains a rough sketch of general geology for the benefit of those who are not familiar with the terms used in this science the

excerpt from the iron ore resources of europe this bulletin gives a summary of the facts concerning the deposits of iron ore in europe and estimates of the quantities of ore and of iron they contain it reports no original research work it is simply the result of a study of the work of many writers and is an attempt to reduce the variant products of that work to common values the geographic review of the deposits is preceded by a brief sketch of the nature and geology of iron ore deposits in general and a few notes on the methods of utilizing the ores the geologic distribution of the deposits is considered and the more extensive deposits are described the economic value of the iron ore in the several countries of europe is shown by the statistics of production and consumption unfortunately the political boundaries of many european states are still uncertain and some valuable ore deposits are not yet definitely allocated to a particular political unit perhaps undue emphasis is given to the deposits of germany and france but the political conditions from which this study arose make this emphasis natural and it is probably in accord with the present popular interest about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
