antitrust policy nominally plays an instrumental public interest role the generally accepted notion is that it is a government instrument designed to intervene in relatively unregulated markets in order to preserve rivalry among independent buyers and sellers competition

authorities are supposed to restrain business conduct that exercises monopoly power aimed at excluding competitors or exploiting consumers and clients thus it can be said although few pro market theorists make the insight explicit that antitrust provisions reveal mistrust of the capacity of markets to promote social welfare the inner logic enforcement mechanisms and practical outcomes of antitrust provisions are all intrinsically contradictory to the natural dynamic course of market functioning in dr de leon s challenging thesis this mistrust of the market lies at the root of antitrust policy giving rise always to a preference towards predicting the result of impersonal market forces rather than interpreting the entrepreneurial behaviour which creates those forces and it is in latin america that he finds the powerful evidence he needs to support his case from the formative years of latin american economic institutions during the spanish empire economic regulations far from being driven by the pursuit of promoting free trade and economic freedom have been conceived enacted and implemented in the context of deeply anti market public policies trade mercantilism and government dirigisme the so called neoliberal revolution of the 1990s triggered by the washington consensus did not really change the interventionist innuendo of these policies but merely restated the social welfare goal to be achieved the pursuit of economic efficiency dr de leon presents his case against the assumption that consumer welfare orientated policies such as antitrust do really promote entrepreneurship and market goals paradoxically antitrust enforcement has undermined the transparency of market institutions in the name of promoting market competition the author s provocative analysis marshals several sets of facts in support of his thesis including the actual functioning of antitrust policy as reflected in case law in various latin american countries the preference of merger control over other less intrusive forms of market surveillance the constrained role of competition advocacy against government acts and the ineffective institutional structure created to apply the policy among the many specific topics treated are the following government immunity strategic industries state owned enterprises politically influential groups measurement of market concentration the burden of proof of social welfare benefits the role of joint trade associations and professional guilds institutional arrangements that favour collusion selective distribution sector regulation erosion of property rights marginal role of courts in the antitrust system leniency programs and privatized public utilities the growing significance of latin america in the context of economic globalization endows this book with huge international interest written by a leading authority on the topic this is the first book that presents a detailed description of latin american antitrust law and policy as it has been developed through numerous judicial opinions a wide variety of audiences around the world will find it of extraordinary value competition law specialists scholars and students of the subject policymakers and politicians in latin america as well as all interested lawyers jurists and economists
