alison prentice's 1977 groundbreaking monograph *The School Promoters* is a revisionist account of public education's emergence; this latest edition includes a foreword and appendices by editors Bruce Curtis, Jennifer Henderson, and Mythili Rajiva, offering updated analysis and primary documents that deepen the understanding of Egerton Ryerson's role in shaping Ontario's educational system. Using a wide range of archival and published sources, *The School Promoters* provides a lucid account of the preoccupations of the white, mostly middle-class reformers connected to Ryerson, who were responsible for the advent of public education in Ontario as part of their concern with the future of Canadian society. This edition situates Prentice's analysis of class domination within the context of settler colonialism, exploring how education worked as a project for genocide as well as a means of social discipline. In particular, the editors expose how the proclaimed universality of public education was contradicted by the reformers' logic for targeting paupers and Indigenous peoples with religious schooling. A reparative reading of Prentice's influential work, *The School Promoters*, Egerton Ryerson and his circle. Second edition highlights the relevance of this groundbreaking social history to contemporary analysis of Canada.

one health is an emerging concept that aims to bring together human animal and environmental health achieving harmonized approaches for disease detection and prevention is difficult because traditional boundaries of medical and veterinary practice must be crossed in the 19th and early 20th centuries this was not the case then researchers like louis pasteur and robert koch and physicians like william osler and rudolph virchow crossed the boundaries between animal and human health more recently calvin schwabe revised the concept of one medicine this was critical for the advancement of the field of epidemiology especially as applied to zoonotic diseases the future of one health is at a crossroads with a need to more clearly define its boundaries and demonstrate its benefits interestingly the greatest acceptance of one health is seen in the developing world where it is having significant impacts on control of infectious diseases

foodborne illnesses continue to be a major public health concern all members of a particular bacterial genera e g salmonella campylobacter or species e g listeria monocytogenes cronobacter sakazakii are often treated by public health and regulatory agencies as being equally pathogenic however this is not necessarily true and is an overly conservative approach to ensuring the safety of foods even within species virulence factors vary to the point that some isolates may be highly virulent whereas others may rarely if ever cause disease in humans hence many food safety scientists have concluded that a more appropriate characterization of bacterial isolates for public health purposes could be by virotyping i e typing food associated bacteria on the basis of their virulence factors the book is divided into two sections section i foodborne pathogens and virulence factors hones in on specific virulence factors of foodborne pathogens and the role they play in regulatory requirements recalls and foodborne illness the oft held paradigm that all pathogenic strains are equally virulent is untrue thus we will examine variability in virulence between strains such as listeria salmonella campylobacter cronobacter etc this section also examines known factors capable of inducing greater virulence in foodborne pathogens section ii foodborne pathogens host susceptibility and infectious dose covers the ability of a pathogen to invade a human host based on numerous extraneous factors relative to the host and the environment some of these factors include host age immune status genetic makeup infectious dose food composition and probiotics readers of this book will come away with a better understanding of foodborne bacterial pathogen virulence factors and pathogenicity and host factors that predict the severity of disease in humans
