this updated revision gives a complete and topical overview on nonconservative stability which is essential for many areas of science and technology ranging from particles trapping in optical tweezers and dynamics of subcellular structures to dissipative and radiative instabilities in fluid mechanics astrophysics and celestial mechanics the author presents relevant mathematical concepts as well as rigorous stability results and numerous classical and contemporary examples from non conservative mechanics and non hermitian physics new coverage of ponderomotive magnetism experimental detection of ziegler s destabilization phenomenon and theory of double diffusive instabilities in magnetohydrodynamics

julian of norwich s revelations of divine love grapples with the same fundamental question that has vexed philosophers and theologians since the advent of monotheistic religion and continues as a barrier to belief for many today namely if god is so good how can natural disaster genocide trauma and my present suffering occur historically there have been two apparently very different approaches to the problem the pastoral or practical on the one hand and the systematic on the other however richard norton suggests that these two lines of thought may not be as separate as they seem and may indeed be dependent on one another for their cohesion drawing on julian s medieval experience of personal and population wide suffering alongside that of more recent theologians such as dorothy solle and jurgen moltmann norton constructs a compassionate model of theodicy that can be of use to both pastoral and systematic theologians throughout he remains sensitive to the raw atrocity of evil while preserving a vision of god as the one who ensures that all shall be well

this book focuses on solving practical problems in calculus with matlab descriptions and sketching of functions and sequences are introduced first followed by the analytical solutions of limit differentiation integral and function approximation problems of univariate and multivariate functions advanced topics such as numerical differentiations and integrals integral transforms as well as fractional calculus are also covered in the book

this authoritative book presents recent research results on nonlinear problems with lack of compactness the topics covered include several nonlinear problems in the euclidean setting as well as variational problems on manifolds the combination of deep techniques in nonlinear analysis with applications to a variety of problems make this work an essential source of information for researchers and graduate students working in analysis and pde s

this book focuses on solving optimization problems with matlab descriptions and solutions of nonlinear equations of any form are studied first focuses are made on the solutions of various types of optimization problems including unconstrained and constrained optimizations mixed integer multiobjective and dynamic programming problems comparative studies and conclusions on intelligent global solvers are also provided

this self contained book covers the theory of semilinear equations with sectorial operator going back to the studies of yosida henry and pazy which are deeply extended nowadays the treatment emphasizes existence uniqueness theory as a topic of functional analysis and examines abstract evolutionary equations with applications to the navier stokes system the quasi geostrophic equation and fractional reaction diffusion equations
