this book offers a multidisciplinary approach to the phenomenon of addiction including a discussion of its anthropological neurological psychiatric and social aspects the editors have maintained this multidisciplinary criterion since the first volume of the psychiatry and neuroscience update collection approaching a topic from multiple points of view guides the mentality to open to biological and psychological relationships and facilitates translational extrapolations the ability to establish relationships closer or more distant but always binding is thus stimulated whether for study research or the interpretation of clinical reality as in previous volumes the book opens with a part dedicated to anthropological and philosophical aspects thus ensuring the validity of the humanistic aspect intersubjectivity epistemological reflections the meaning of ecstasy and philosophical reflection leading to therapy are explored part 2 from basic neurosciences to human brain presents a set of basic investigations with high translational content this corresponds with the editors intention to build bridges here between the basic and the clinical favoring the translational chapters present topics of interest to both fields such as the neurobiology of addictions cocaine and benzodiazepines part 3 establishes links between neurosciences learning teaching and the social environment it begins with a chapter on executive functioning before discussing excessive use of computer technology and educational interventions for patients with alcohol addiction the fourth part of the book attempts to explain pathological human behavior it is about establishing links between brain disorders and diseases in the strict sense among other topics chapters deal with cognitive

dysfunction in addiction neuroimaging and stigma around substance use disorders psychiatry and neuroscience update addiction from laboratory and anthropology to clinical practice vol v was edited and authored by a multidisciplinary group of authors and will be vital for an equally multidisciplinary group of readers psychiatrists psychologists neuroscientists and any other clinician or researcher that is interested in addictions those in the humanities particularly anthropologists and philosophers will find the first part of great interest

this research topic is the second volume of its kind please see the publications of the first collection here cannabis has been used in even the oldest traditional medicines available in the last century somewhat negative attention has prevailed when it comes to the psychotropic and addictive effects and abuse potential for this reason cannabis has been banned and is illegal in many countries in recent years however there has been a more in depth evaluation of the legalization of cannabinoids for medical use in several countries following heightened media attention and reports of effectiveness although not always thoroughly backed up by scientific evidence in fact up to now the results from studies discussing the efficacy of the medical use of cannabis are sometimes contradictory and not always conclusive some factors fueling this inconclusiveness include the heterogeneous nature of the studied populations different cannabis preparations and dosages studies with uncontrolled settings and different routes of administration moreover these uncertainties are partly derived from legislative restrictions which over time have severely limited the conduction of rigorous controlled and comparable studies the official introduction of pharmaceutical grade cannabis inflorescences for medicinal purposes has allowed physicians and pharmacists respectively to legally prescribe and prepare several cannabis preparations such products are currently being administered to patients without their efficacy being evaluated in controlled studies for each patient the composition and route of administration may be different in addition many advanced administration systems have been developed or are still under development but few clinical trials have been completed this second volume welcomes submissions of original research and review articles building on and focusing on the in depth analysis of the legal technological and pharmacological aspects related to the medical use of chemically characterized cannabis based formulations studies carried out in the past or still in progress will also be considered to assess what evolution there has been in using cannabis to treat diseases or conditions we invite submissions dealing with the following themes including but not limited to cannabis based formulations current and future applications in therapy legal technological and pharmacological aspects related

to the medical use of cannabis non clinical evidence supporting therapeutic applications of cannabis including in vivo in invitro and in silico studies important note for authors only studies dealing with highly purified chemically characterized cannabis containing formulations where the chemical structure and purity must be precisely described by appropriate analytical methods will be considered for review in experimental pharmacology and drug discovery the following studies can be accepted for review in ethnopharmacology if the extract is characterised in sufficient detail as is needed for a licensed medicine see here i clinical trial articles will be accepted for review only in the case that they are randomized double blinded and placebo controlled ii any studies relating to advanced formulations or galenic preparations to better evaluate the potential effects of their application in future therapies

the most comprehensive text available on the use of evidence based medication therapies for optimal patient outcomes updated with the latest breakthroughs and guidelines a doody s core title for 2019 pharmacotherapy a pathophysiologic approach is written to help you advance the quality of patient care through evidence based medication therapy derived from sound pharmacotherapeutic principles the scope of this trusted classic goes beyond drug indications and dosages to include the initial selection proper administration and monitoring of drugs you will find everything you need to provide safe effective drug therapy across the full range of therapeutic categories presented in full color the tenth edition is enriched by more than 300 expert contributors and every chapter has been updated to reflect the latest in evidence based information and recommendations this sweeping updates include tables charts algorithms and practice guidelines this edition is also enhanced by a timely all new chapter on travel health here s why this is the perfect learning tool for students patient focused pharmacists and other health care providers all chapters have been updated to provide the most current reliable and relevant information possible key concepts at the beginning of each chapter clinical presentation tables summarize disease signs and symptoms clinical controversies boxes examine the complicated issues faced by students and clinicians in providing drug therapy color coded diagnostic flow diagram treatment algorithms dosing recommendations and monitoring approaches clearly distinguish treatment pathways most disease oriented chapters include updated evidence based treatment guidelines that often include ratings of the level of evidence to support the key therapeutic approaches edition after trusted edition pharmacotherapy a pathophysiologic approach has been unmatched in its ability to clearly and impartially impart core pathophysiological and therapeutic elements that students and

practitioners must be familiar with

getting the right diagnosis is a key aspect of health care it provides an explanation of a patient s health problem and informs subsequent health care decisions the diagnostic process is a complex collaborative activity that involves clinical reasoning and information gathering to determine a patient s health problem according to improving diagnosis in health care diagnostic errors inaccurate or delayed diagnoses persist throughout all settings of care and continue to harm an unacceptable number of patients it is likely that most people will experience at least one diagnostic error in their lifetime sometimes with devastating consequences diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment providing unnecessary or harmful treatment or resulting in psychological or financial repercussions the committee concluded that improving the diagnostic process

is not only possible but also represents a moral professional and public health imperative improving diagnosis in health care a continuation of the landmark institute of medicine reports to err is human 2000 and crossing the quality chasm 2001 finds that diagnosis and in particular the occurrence of diagnostic errors has been largely unappreciated in efforts to improve the quality and safety of health care without a dedicated focus on improving diagnosis diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity just as the diagnostic process is a collaborative activity improving diagnosis will require collaboration and a widespread commitment to change among health care professionals health care organizations patients and their families researchers and policy makers the recommendations of improving diagnosis in health care contribute to the growing momentum for change in this crucial area of health care quality and safety

a comprehensive reference cum textbook on fundamentals and principles of weed science includes updated information on newer approaches ecophysiological and biological in weed management newer herbicides bioherbicides herbicide action mechanisms and transformations in plants herbicide persistence and behaviour in soil and environment and interaction of herbicide with other aerochemicals
