cancer 100 ways to fight your own attitude is your brightest guiding star some of success is doing what you like to do but

more of it is doing the things you don't like to do but must it is too easy to make an excuse and not do it and fail John Roberts as this book goes to press early in 2010 I am 75 and into my fifth year with incurable metastatic prostate cancer which had already spread to the bones before cancer was diagnosed and the prostate removed the statistical prognosis for the current treatments of choice is that one half of these patients will die within three years 75 within five this usually happens after the standard treatments and chemotherapy fail and must be discontinued due to harmful side effects or weakening effectiveness resumed cancer growth and the failure of bones or key organs I am still feeling fine no pain living a normal life and I have completed eight months of chemotherapy with a 63 drop in my PSA prostate cancer blood test without major side effects or rising PSA I have fought this cancer and its personal consequences in more than a hundred ways as described here above all a lifetime of fitness and my current excellent physical and mental condition supplemented by great medical care and everything else I can learn or think of is partially responsible for my success in living beyond the average life span for my particular fatal disease we cannot know which weapon or how much each one contributes to the extension of life so we must use them all the doctors all say that cancer survival is very unpredictable and I figured that many of the positive outcomes must depend on how comprehensively and how hard the individual fights so I immediately started this book and organized my fight I was extremely unfortunate most prostate cancer either is so slow growing or eliminated by removal that survivors live for many years in my case it had already spread or metastasized to the bones prior to the operation and that cancer is inoperable and incurable but some people in that condition die very early while others like me live much longer this is highly unpredictable in individual cases due to variation in patient condition treatment effectiveness and other unknowns more than half of all people newly diagnosed with cancer will be cured or given extended remission they will die of something else of the other half a large number have treatable cancer and they still have many years to live the remainder probably including me have learned that they have incurable cancer that has grown too strong or spread and taken root in such places that it cannot be killed or removed and death is likely in the next few months or years nevertheless normally incurable cancer and conventional predictability sometimes fail and others may prolong life by fighting with strong mental and physical effort as the disease progresses and is treated and science advances sometimes in great leaps we are rarely sure of which group we are in that uncertainty that hope and the dreadful power of cancer call for great strength of character and effort in both patients and those around them this book is about that the animal instinct to survive is in humans alone expanded in our unique cortex to something much greater the intelligent understanding of self awareness and an intense desire to prolong the experience growth and emotion of life the human spirit beyond the mere motivation of existence is largely responsible for all that our species has conquered and achieved it is an essential quality to be trained treasured and put to use and one of the finest ways is to survive continue and improve our exceptional life through our collective and individual intellect in the last century medical science the visibility of living in distant years and the recognition that we are and can be responsible

when you or someone you love is diagnosed with cancer it feels like your whole world is falling apart not knowing what will happen next is terrifying and that is the main reason i wrote this book hoping that my experience could help others the first title of this book was my body is weak but my mind is strong starting out as a story about my personal battle with cancer and that was the mantra i used to hype myself up before my final chemotherapy session unfortunately someone close to me was also diagnosed with cancer before i could finish that story so i went through the process of becoming a cancer caregiver thus the new title for this book was born my battles with cancer reflecting my journey as as both a cancer patient and caregiver all throughout the writing and editing process there was a fire burning in my mind pushing me to keep chipping away every day and telling me to have faith in the idea that eventually it would all come together during my hospital visits and everywhere else i went i took notes and churned out ideas in the back of my mind as i continued to ponder the greater questions from my patient and caregiver journey with this book in mind now exactly two years to the day since my last cancer treatment i am publishing this book ready to share with the world my journey and ready to move on to some new and exciting adventures it is my great pleasure to share with you now some of the high and low points i went through in my journey as a cancer patient and caregiver my hope is that by sharing my stories and observations along the way it may help other people with their learning curve good luck with your battles cheds
